Shooting Stars: Meteor Bollard Featured in *Architectural Products* Noteworthy Sustainable Products

August 3, 2010

Architectural Products

http://www.arch-products.com/productwire/archives.asp?PW_ID=80

Meteor was recently featured in Architectural Product's August Product Wire featuring new products which incorporate sustainable zero-impact designs. Stressing the bollard's ability to solve troublesome and costly aspects of light installation, Meteor bollards are easy to install due to its no-wiring design. Incorporating advanced LED and hybrid LiFe battery technology, Meteor bollards maximize lighting period for up to 12 hours with only 4 hour direct sunlight charge. Meteor bollards are also finished with fluoropolymer coating to withstand the most extreme environments.

In environmentally enlightened times, landscape architects are more keen on incorporating products which have no adverse affects on sensitive environment. As sustainable managed landscapes become assets, Meteor provides an environmentally sound renewable energy alternative that matches conventional architectural-grade lights for quality and performance.
