## **New York House celebrates the winners of its first-ever Innovative Green Design Awards.**

**June 2009**

While there were numerous fluorescent and LED lighting entries, many of them quite innovative or aesthetically pleasing, the judges found ILOS Corporation's Meteor solar ground and paver lights to combine cutting-edge technology with functionality and design aesthetics. The lights use the latest in solar cell, LED lighting, and EDLC ultracapacitor technology (which gives them a seven- to 10-year lifespan) to be as sturdy and reliant as conventionally powered equivalents, the company says. Because they're self-contained, they required no external power and no wiring, thereby reducing environmental impact. "For driveways and building lighting, it really solves a lot of problems, judge Carol Kurth said. "With digging, you're disrupting trees and shrubs and grass or habitat. I think this is just a great solution."
