

Meteor Solar LED Lighting is the first company to have their Solar LED products installed on the National Mall in Washington D.C.

For those who did not attend the Solar Decathlon 2009 in D.C., one of the world largest green building competitions, held biannually by US Department of Energy, we would like to share with you some great project pictures. Without wiring and transformers, Meteor Solar LED not only helped the builders save time and money with their projects, but also allowed the Team California project, Penn State project and the whole main thoroughfare of the Mall to become quite different at night.

Solar Decathlon Main Thoroughfare
